EDLD 651 Final Project Draft

Introduction

We explore proportion of graduation (outcome), across several categorical variables. In particular, we plan to focus on English learners vs. English proficient students.

Not only will we report these outcomes across different groups, we will also explore these across boroughs, too, to see if English learners are succeeding equally across boroughs, compared to the English proficient students in their boroughs.

Methods

Data was taken from INSERT LINK

Participants

Explain participants' from what we have in data.

Data analysis

All analysis were conducted in R, with heavy reliance upon the `{tidyverse}` packages to manipulate and visualize the data.

Results**Discussion**

Differences appear to be blah by blah for blah. XYZ boroughs should consider blah blah blah, based on the results. Inferential tests are recommended for next directions.
